

## 18 TPI Sub-Compact Portable Band Saw Blade (3 Pk)

The 18 TPI Sub-Compact Portable Band Saw Blade (3 Pack) shows off the exceptional durability of its blades. Constructed from precision steel teeth, the strength of the Milwaukee® band saw blade comes from the alloy steel backing, lengthening the life of your blades to consistently cut through metals. The carefully crafted Matrix II high speed steel teeth offer durability while handling metal-cutting projects, including angle iron, conduit, copper tube, pipe, strut and threaded rod. The metal cutting band saw blade powers through common materials with 5/32- to 3/16-inch thickness or harder materials with 3/16- to 5/16-inch thickness. With the 27-inch length, the set includes three blades to maintain the precision of your band saw during every project. For the best results, combine the sub-compact Milwaukee portable band saw blade with its counterpart, the Milwaukee M12™ sub-compact band saw.
