

12 PK Cut Level 3 Insulated Winter Dipped Gloves

Our 12 pack of small ANSI Cut Level 3 Winter Insulated work gloves are designed to provide ultimate warmth, all-day comfort, and best in class dexterity for handling small objects. The insulated winter work gloves utilize a warm acrylic terry liner to maintain warmth in the coldest outdoor conditions. The gloves have a secure dual thermal liner to comfortably keep your hands warm without the liner separating after extended use on the job site. These gloves feature a 7GA inner liner for added warmth. Our cut resistant work gloves are ideal for demolition, wire-stripping, and pipe threading applications. Our gloves are constructed of 3/4 double-dipped latex palm microfinish for water resistance to provide best in class grip performance in the coldest temperatures.
