

HOLE DOZER™ General-Purpose Hole Saw Kit - 13PC

The Ice-Hardened™ Bi-Metal Hole Saw Kit comes with everything you need to cut holes for wiring, pipes, conduit and more. The bi-metal design creates a special combination of sharpness and hardness so that you can run these saws all day long. A special cryogenic process removes softer metal from these ice-hardened hole saws for faster, easier holes. The two pilot bits center the hole for professional-level accuracy and keep the saw from wandering to prevent damage to your work piece. With two arbors and pilot pits you and a partner can both work with these bi-metal hole saws to finish your job in half the time.
