

# Additional information

These highly visible markers that meet ASME (ANSI) standard ZG3.22 are printed with a high contrast black ink, are designed to alert employees to potential workplace electrical hazards and used to identify voltages on conduit, power and distribution panels, electrical components, and control panels. Identifies the number of volts and the type of energy source. Resistant to oil, grease and water. The aggressive adhesive, combined with the flexible vinyl material provide a conformable label that is durable and will hold up in industrial applications. The smooth surface of the vinyl allows dirt and grime to be easily wiped off.
