The RIDGID Count Plus (31753) Cable Counter is designed for use with SeeSnake Standard and SeeSnake Mini Reels. The CountPlus is a distance counter that can track the total length of pushrod that has been run out of the drum or measure distance from some local zero-point selected during the inspection (such as a pipe head or joint). The CountPlus can also display overlays of text messages such as labels of pipe line features. The CountPlus is intuitive to operate - simply press on the CountPlus Menu Key to bring up the Main Menu screen with three icons on it.

The CountPlus interface allows you to set up and modify a number of important parameters for use with your SeeSnake System. These include:

- System Time
- System Date
- Reel and Cable
- Units of Measure
