

DESCRIPTION

Bosch 7-1/4 In. 24 Tooth Construction Portable Saw Blade Framing

Bosch Edge Circular Saw Blades start sharp, stay sharp and resist impact damage for long life. They are designed for tough jobs, because they are engineered with Brute Carbide, an upgraded C3/C4 micrograin carbide formulation. They have face-ground teeth for clean cuts. A round 5/8 In. arbor with a diamond knockout makes it compatible with worm drive saws. To avoid warping, these blades have been built with expansion slots. These blades reduce kickback, and they have body slots for excessive heat.

FEATURES

Brute Carbide – an upgraded C3/C4 micrograin formulation for increased impact damage resistance

ATB tooth geometry – for fast cross cutting, cutoff and trim of wood and plywood

SpeedCoat – an antifriction finish for faster cutting with no burning or melting

Thinner kerf – provides faster cuts and less waste

Extra-hard steel blade body – delivers accuracy and resists bending and deflection for true cuts

Edge blades – developed for extreme performance for specific material and application

Quality manufacturing – features the best materials and innovative engineering
