

Product 20885

Number:

Order CF32DT/E/IN/835/ECO

Abbreviation:

General DULUX 32W triple compact fluorescent amalgam lamp with 4-pin base, 3500K color **Description:** temperature, 82 CRI, for use with electronic and dimming ballasts, ECOLOGIC

Product Information

Abbrev. With Packaging Info. CF32DTEIN835ECO 50/CS 1/SKU

 Average Rated Life (hr)
 16000

 Base
 GX24Q-3

 Bulb
 T4X3

 Color Rendering Index (CRI)
 >= 80

 Color Temperature/CCT (K)
 3500

 Diameter (in)
 0.472

 Diameter (mm)
 12.00

Family Brand Name Dulux® T/E
Industry Standards IEC 60901- 7432

Initial Lumens at 25C 2400

Mean Lumens at 25C 2002

Maximum Overall Length - MOL (in) 5.6

Maximum Overall Length - MOL (mm) 142

NEMA Generic Designation (old) CFM32W/GX24Q/835

Nominal Voltage (V) 120.00 Nominal Wattage (W) 32.00

Footnotes

- Minimum starting temperature is a function of the ballast; consult the ballast manufacturer.
- There is a NEMA supported, industry issue where T2, T4, and T5 fluorescent and compact fluorescent lamps operated on high frequency ballasts may experience an abnormal end-of-life phenomenon. This end-of-life phenomenon can resultin one or both of the following: 1. Bulb wall cracking near the lamp base. 2. The lamp can overheat in the base area and possibly melt the base and socket. NEMA recommends that high frequency compact fluorescent ballasts have an end-of-life shutdown circuit which will safely and reliably shut down the system in the rare event of an abnormal end-of-life failure mode described above. The final requirements of this system are yet to be defined by ANSI. For additional information refer to NEMA papers on their WEBSITE at www.NEMA.org.
- Lumen output and life rated on high frequency operation.
- Rule of Thumb for Compact Fluorescent Lamps: Divide wattage of incandescent lamp by 4 to determine approximate wattage of compact fluorescent lamp that will provide similar light output.
- Optimum light output for DULUX T/E IN amalgam compact fluorescent lamps occurs at approximately 35 deg. C/95 deg. F ambient temperature when the lamp is operated in the base up position. The lumen value listed refers to the optimum light output. Non-amalgam

compact fluorescent lamps provide atleast 90% light output from 60-100 degrees F in the base up position, the temperature range is narrower for horizontal or base down position.

- Approximate initial lumens after 100 hours operation.
- The life ratings of fluorescent lamps are based on 3 hr. operating cycles under specified conditions and with ballast meeting ANSI specifications. If operating cycle is increased, there will be a corresponding increase in the average hours life.
- Minimum starting temperature is a function of the ballast; consult the ballast manufacturer.
- SYLVANIA ECOLOGIC fluorescent lamps are designed to pass the Federal Toxic Characteristic Leaching Procedure (TCLP) criteria for
 classification as non-hazardous waste in most states. TCLP test results are available upon request. Lamp disposal regulations may vary, check
 your local & state regulations. For more information, please visit www.lamprecycle.org
- Mean lumens are measured at 40% of average rated lamp life.
- The distance between any parts of the lamp and any conductive surface of the luminaire should not be less than 3 mm (applies to all high frequency ballasted systems).
- The lamp should not be in contact with any surface of the luminaire (applies to either high frequency or 60Hz ballasted systems).
